

Codex Template

Caveats

This template was made based on a quick look at an Ork codex.

Other caveats of this template include:

- No figure environment. There are workarounds, but floats *will not work* in multicol environment. Passing twocolumn option to article class allows floats, but then you only have two columns.
- Footnotes are like this¹. If you want footnotes that only span the bottom of columns, there are solutions online. Also, footnotes may not appear on the same page as they were referenced. Again, solved by twocolumn option used instead.
- If you want more control of things (e.g. having a picture span across only two columns), I recommend the flowfram package. It is more complicated than multicol, but gives enough control over layout that you could make a professional magazine if you wanted to.

Although there are no figures, you can still do this

That is one mean looking ork.

Fancy headings ala 40k codex's

should be possible through XeTeX, and redefining the section commands. The rest of this document is Lorem Ipsum to show how how good it is.
